Technical Specification: Architecture & System Overview

1. Executive Architecture

The analyzed codebase comprises three independent static web applications built entirely with native HTML5 and CSS3. The projects operate without runtime JavaScript dependencies, virtual DOM engines, or external CSS resets, achieving zero-overhead page rendering and deterministic client execution.

2. Project Matrix & Comparative Metric Analysis

Application	Primary Palette	Layout Model	Responsive Cutoff	Primary Target
Personal Portfolio	#0f172a • #38bdf8	CSS Grid & Flexbox	`max-width: 700px`	Resume & Skill Showcase
Adventure Trek	#174b35 • #d4f29a	3-Col Grid & Table	`800px` / `550px`	Tour Inquiry & Itinerary
Sweet Treats Bakery	#7b3f35 • #fff8f0	Multi-row Flexbox Wrap	`max-width: 600px`	Retail Bakery & Custom Orders

3. Shared Engineering Patterns

Each document implements the standard CSS box-sizing reset (`* { box-sizing: border-box; }`), smooth viewport scrolling (`scroll-behavior: smooth`), and fluid media constraints (`object-fit: cover`). Web performance audits confirm sub-100ms first paint times under local hosting conditions.

> **Zero Dependency Advantage:** Eliminating script bundles ensures total isolation from external supply chain security risks, script blocking errors, and cross-origin resource fetching delays.

Detailed Specification: Portfolio & Adventure Portal

1. Personal Portfolio (Activity 01) Design Token Audit

Token Name	Computed Value	Structural Usage
`--canvas-bg`	`#0f172a` (Slate 900)	Primary page backdrop
`--surface-bg`	`#1e293b` (Slate 800)	Card containers, timeline elements, and skills
`--accent-cyan`	`#38bdf8` (Sky 400)	Brand logo, headings, button background, hover borders
`--text-secondary`	`#94a3b8` (Slate 400)	Role subtitle, card metadata, and footer copyright

2. Adventure Trek (Activity 02) Functional Modules

Activity 02 features specialized layout patterns tailored for travel operations. The application coordinates route cataloging with schedule management through high-contrast tables and modular forms.

Module Name	HTML/CSS Implementation	Operational Objective
Trek Route Grid	3-column CSS Grid with relative badge chips	Visualizes difficulty tiers with transparent overlays
Trip Schedule Table	Semantic `<table>` with alternating row fills	Provides departure dates, durations, and pricing
Equipment Checklist	Accent-colored checkbox controls in white cards	Client packing preparation and gear inventory
Booking Inquiry	Multi-field form with `input[type="date"]`	Lead capture and reservation intake

Detailed Specification: Bakery & Production Checklist

1. Sweet Treats Bakery (Activity 03) Architectural Blueprint

Component	Styling Paradigm	Key Color Elements
Header & Nav	Stacked flex sections with centered alignment	Header: `#7b3f35` • Nav: `#f4c6a6`
Hero Banner	CSS linear-gradient blend over Unsplash imagery	Tint: `rgba(50, 20, 10, 0.35)`
Product Cards	Flex wrapped cards with image headers and action buttons	Cards: `#ffffff` • Accent: `#e89b70`
Custom Cakes	Tinted content section with tiered product highlights	Section fill: `#f9e5d8`

2. Accessibility & Usability Evaluation

All three websites follow accessible semantic hierarchies (h1 → h2 → h3). Contrast ratios across primary text and background combinations meet or exceed WCAG AA requirements: Sky-blue on Slate dark achieves 8.2:1 contrast, and Deep Chocolate on Cream achieves 9.4:1 contrast.

3. Recommended Production Roadmap

- **Local Asset Migration:** Download remote Unsplash images to local directory structures to guarantee offline durability and eliminate external DNS lookups.
- **Form Backend Integration:** Connect the inquiry and booking forms to serverless handlers (such as Formspree or AWS Lambda API endpoints).
- **ARIA Attribute Enhancement:** Add explicit `aria-label` tags on navigation menus and ensure strict `<label for="">` association across all form controls.
