Web Activity Projects

Three small, single-file static websites built with plain **HTML, CSS and a little JavaScript**. No frameworks, no build step, no dependencies - open any file in a browser and it works.

#	Project	File	Theme	JavaScript
1	Personal Portfolio	`pages/1_portfolio.html`	Dark, developer portfolio for "Hemant"	None
2	Adventure Trek	`pages/2_adventure_trek.html`	Trekking & camping booking site	Booking form, trek preselect
3	Sweet Treats Bakery	`pages/3_sweet_treats_bakery.html`	Bakery storefront	Offer, order message, alert

Project structure

```

```

How to run

1. Download or clone the folder. 2. Double-click any file in `pages/` (or right-click -> Open with -> your browser). 3. An internet connection is needed only to load the photos (Unsplash) used by projects 2 and 3.

1. Personal Portfolio

A single-page dark-theme portfolio with smooth anchor navigation.

- **Sections:** Home (hero), About, Skills, Experience, Projects, Education, Contact, Footer
- **Features:** pill-style skill tags, timeline cards, responsive project grid, hover lift/border effects
- **Responsive:** layout adapts under 700px (nav links are hidden on mobile)
- **To personalise:** replace "Company Name", the `#` project links, and the GitHub / LinkedIn placeholders

2. Adventure Trek

A trekking and camping company site with a working demo booking form.

- **Sections:** Header + nav, Hero, Popular Treks (3 cards), Trip Schedule table, Equipment checklist, Safety guidelines, Booking form, Footer
- **Features:**
  - "Book Trek" on a card scrolls to the form and **pre-selects that trek** in the dropdown
  - Date picker blocks past dates
  - Submitting shows a confirmation message (demo only - nothing is sent anywhere)
- **Responsive:** 3 -> 2 -> 1 column trek grid (800px / 550px), scrollable table on phones

3. Sweet Treats Bakery

A warm-themed bakery storefront.

- **Sections:** Header, Nav, Hero, Seasonal Offer, Products (4), Custom Cakes (2), Gallery (3), Contact, Footer
- **Features:**
  - "View Offer" reveals the discount code `SWEET15`
  - "Order Now" shows which item was selected
  - "Contact Us" opens an alert with the phone number
- **Responsive:** product cards and nav wrap on screens under 600px

Screenshots

All captured with headless Chromium. The sandbox had no internet access, so photos appear as grey placeholders - they will display normally when you open the pages online.

Page	Desktop	Mobile
Portfolio	`screenshots/portfolio_desktop_full.png`	`screenshots/portfolio_mobile_full.png`
Adventure Trek	`screenshots/trek_desktop_full.png`	`screenshots/trek_mobile_full.png`
Bakery	`screenshots/bakery_desktop_full.png`	`screenshots/bakery_mobile_full.png`

Interaction captures: `bakery_offer_clicked.png`, `bakery_order_selected.png`, `trek_form_filled.png`, `trek_form_submitted.png`.

Known issues / suggested improvements

- **Portfolio:** there is no `nav { ... }` CSS rule, so the menu is unstyled (stacked top-left, not fixed). On mobile the links are hidden with no hamburger replacement. The email link points to `mail.google.com` instead of a `mailto:` address.
- **Adventure Trek:** checklist checkboxes render above their labels (the global `input { width:100% }` rule applies to them). There are stray `</div></section>` tags after the treks section. The dropdown lists Mountain Camping and Stargazing Camp, which have no card or schedule entry.
- **Bakery:** product cards have uneven heights, so the Order buttons do not line up. The hero and Chocolate Cake use the same photo. Address, phone and email are placeholders.
