Web Activity Projects

Documentation of three static websites

#	Project	File	Purpose
1	Personal Portfolio	1_portfolio.html	Dark-theme developer portfolio
2	Adventure Trek	2_adventure_trek.html	Trekking and camping booking site
3	Sweet Treats Bakery	3_sweet_treats_bakery.html	Bakery storefront with offers and product cards

Technology: HTML5, CSS3 (Flexbox, Grid, media queries), vanilla JavaScript. Every site is a single self-contained file with embedded CSS and no external libraries.

1. Comparison at a glance

	Portfolio	Adventure Trek	Sweet Treats Bakery
Theme	Dark navy, sky-blue accents	Forest green, lime accents	Warm brown and peach
Layout	Flex + centered sections, CSS grid projects	Grid (3/2/1 columns), 2-column panels	Flex-wrap product cards
JavaScript	None	Preselect trek, date min, form submit	Three click handlers
Forms	None	Booking inquiry form (6 fields)	None
Images	None	4 remote photos	9 remote photos
Breakpoints	700 px	800 px and 550 px	600 px
Sections	8	7	8
File size	13 KB	18 KB	10 KB

How to run

Open any HTML file from the pages/ folder in a web browser. No server or installation is needed. An internet connection is required only to load the photographs on projects 2 and 3.

2. Personal Portfolio

A single-page portfolio for a first-year B.Tech student, using a dark colour scheme and smooth anchor scrolling between sections.

Page structure

Section	Content
Navigation	Logo "Hemant" and seven anchor links
Hero	Name, tagline (Aspiring Web Developer, B.Tech 1st Year), "View My Work" button
About	Short introductory paragraph
Skills	Eight pill tags: HTML, CSS, JavaScript, Python, Java, SQL, Git, GitHub
Experience	Timeline cards: Software Developer Intern, Freelance Developer
Projects	Three project cards in a responsive auto-fit grid
Education	Bachelor's degree (NRI University, 2026-2030) and Intermediate (Sri Sarada, 2023-2026)
Contact	Email, GitHub, LinkedIn links; footer with copyright

Key features

- Smooth scrolling and a full-height hero section
- Hover effects: lifted buttons, skill tags and project cards with a blue border highlight
- Colour palette defined by a consistent slate/sky-blue scheme (#0f172a, #1e293b, #38bdf8)
- Mobile rules under 700 px: smaller headings and tighter section padding

Observations and suggested fixes

- **Navigation is unstyled.** The CSS styles `.logo` and `nav ul` but has no nav rule, so the logo and links stack at the top-left and are not fixed or spaced. Adding a flex, fixed-position nav rule would match the 100 px hero padding that was clearly designed for it.
- **No mobile menu.** Below 700 px the link list is hidden and nothing replaces it.
- **Email link** opens mail.google.com; a `mailto:` link is the usual choice.
- **Placeholder content:** "Company Name", project links set to #, and GitHub / LinkedIn "yourusername" need real values.
- **Minor CSS:** `scroll-behavior` is set on `*` (it belongs on `html`), and project description text uses the same blue as headings.

3. Adventure Trek

A trekking and camping company site that lets visitors browse routes, check dates, review gear and safety rules, and submit a demo booking inquiry.

Page structure

Section	Content
Header	Brand and nav: Home, Treks, Schedule, Equipment, Book Now
Hero	420 px banner with background photo and "Explore Treks" button
Popular Routes	Green Valley (Easy, 1 day, Rs 999), Forest Adventure (Moderate, 2 days, Rs 2,499), Mountain Summit (Difficult, 3 days, Rs 4,999)
Trip Schedule	Table of four departures from 15 Nov to 5 Dec 2026
Equipment	Eight-item checklist with checkboxes
Safety	Eight safety guidelines in a highlighted amber panel
Booking	Name, email, trip dropdown, date, participants (1-20), notes

JavaScript behaviour

- **Date limit:** the date picker's minimum is set to today's date so past dates cannot be chosen.
- **Trek preselect:** each "Book Trek" button carries a `data-trek` value and sets the dropdown when clicked.
- **Form submit:** the default submission is blocked, a personalised confirmation (name, trip, date, participants) is shown, and the form resets. Nothing is sent to a server.

Responsive design

The trek grid shows 3 columns, then 2 below 800 px and 1 below 550 px. The info panels stack at 800 px, the header becomes a column at 550 px, and the schedule table scrolls horizontally with a 500 px minimum width.

Observations and suggested fixes

- **Checklist layout:** the global `input { width:100% }` and block-level `label` make each checkbox sit centred above its text. Targeting `input[type=checkbox]` with `width:auto` fixes it.
- **Stray markup:** an extra `</div></section>` follows the treks section. Browsers tolerate it, but it should be removed.
- **Dropdown vs content:** Mountain Camping and Stargazing Camp can be chosen in the form but have no card or schedule row; only Weekend Camping appears in the schedule.
- **Reused photo:** the hero image and the Forest Adventure card use the same Unsplash photo.
- The price stays fixed regardless of participant count; a live total would be a natural enhancement.

4. Sweet Treats Bakery

A cheerful, warm-toned storefront for a bakery, presenting products, a seasonal discount, custom cake options, a photo gallery and contact details.

Page structure

Section	Content
Header and nav	Title "Sweet Treats Bakery", tagline, and six anchor links
Hero	Cake photo with overlay, headline "Life Is Sweeter with Cake!", menu button
Seasonal Offer	15% off selected cakes with code SWEET15
Products	Chocolate Cake Rs 550, Fresh Pastries Rs 90, Choco Cookies Rs 150/pack, Special Cupcakes Rs 70 each
Custom Cakes	Birthday (from Rs 700) and Wedding (from Rs 2,000) cards, enquiry button
Gallery	Three photos in a wrapping row
Contact	Address, phone, email, opening hours 9 AM - 9 PM

JavaScript behaviour

Function	Triggered by	Result
showOffer()	View Offer button	Writes the SWEET15 reminder under the offer
orderItem(item)	Order Now on each product	Shows "You selected [item]. Please contact our bakery..."
contactBakery()	Contact Us button	Browser alert with the phone number

Responsive design

Under 600 px the nav links become inline blocks with extra margin, the hero heading shrinks, and product cards fill up to 320 px width.

Observations and suggested fixes

- **Uneven card heights:** the Choco Cookies description wraps to two lines, so its Order button sits lower than the others. Making cards flex columns with the button pushed to the bottom would align them.
- **No real ordering:** Order Now only displays a message. A cart or a link to a phone/WhatsApp order would make it functional.
- **Reused photo:** the hero and Chocolate Cake share the same image.
- **Placeholder contact details:** "Main Road, Your City", the phone number and example.com email need real values.
- The alert() on Contact Us could be replaced with a `tel:` link, which is friendlier on phones.
